Experiment -1

AIM: To create an AWS free tier account to provision the resources.

Description:

Amazon Web Services (AWS) is a cloud computing platform that provides on-demand services such as computing, storage, databases and networking. An AWS account is required to access the AWS Management Console and provision cloud resources. Account registration involves email verification, contact and billing details, and identity/mobile verification when requested. The available Free plan and its usage limits should be reviewed during registration.

Prerequisites: Valid email ID, mobile number, full name and address, internet connection, an accepted payment method (if requested), and an accepted identity document if AWS asks for it.

Steps:

1. Open a browser and visit https://aws.amazon.com/free.
2. Click “Sign in to console”, then select “Create a new AWS account”.
3. Enter your email address, create a password, and provide an AWS account name.
4. Click “Verify email address”. Enter the OTP sent to your email and continue.
5. Review the account plans shown and select the available Free plan, if suitable.
6. Enter your full name, phone number and address. Review the details and continue.
7. Provide the requested billing/payment information. Choose an available card or UPI option as displayed. 8. Complete identity verification if requested. Select the applicable registration purpose and ownership type, then submit an accepted document using the method shown by AWS.
9. Enter your mobile number, request the SMS code, and enter the OTP to verify it.
10. Wait while AWS completes account setup. The time required may vary.
11. After setup, open https://console.aws.amazon.com.
12. Sign in with the registered root-user email address and password to view the AWS Management Console.

Output:

The AWS account is created and the required verification procedures are completed. The AWS Management Console dashboard is displayed, the account name is visible in the account menu, and the available account plan and AWS services can be accessed.
